DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ryan C. Cady on April 19, 2007.

The application has been amended as follows:

The non-elected claims 1-11 have been canceled.

Allowable Subject Matter

1. Claims 12-15 and 17-19 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Claims 12-15 and 17-19 are allowable because the prior art of record neither anticipated nor rendered obvious that a process for producing a retardation element for use in a display element comprises various related steps as claimed with specific features recited in claim 12 as follows:

curing the liquid crystal layer formed on the substrate by applying first radiation to the liquid crystal layer, and a quantity of the first radiation applied to the liquid crystal layer being varied over a group of fine areas in the liquid crystal layer, and each of the fine area of the liquid crystal layer (red pixel display section, green pixel display section and blue pixel display section) corresponding to a respective one of the red, green and blue display sections; then bring the cured liquid crystal layer into contact with an organic solvent to develop an uncured component of the liquid crystal layer; and further curing the cured liquid crystal layer subsequent to bring the cured liquid crystal layer into contact with the organic solvent; wherein each of the fine areas of the resulting retardation element has a thickness corresponding to the quantity of the first radiation applied to the respective one of the fine areas; and further curing the cured liquid crystal layer comprises applying second radiation to fully cure the semi-cured and uncured portions of the previously cured liquid crystal as shown in Fig.3.

The reference Gunning teaches that a process for fabricating a photo-patterned compensator in which the step 335 in Fig.3 shows illuminating the film with ultraviolet

radiation so as to polymerize the previously unpolymerized region of the film, and in this operation the ultraviolet radiation cures those region using similar condition as the previous curing, but such radiation curing does not teach such specific way to fully cure the semi-cured and uncured portions of the previously cured liquid crystal layer as claimed.

Conclusion

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mike Qi whose telephone number is (571) 272-2299.

The examiner can normally be reached on M-T 7:30 am-6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Nelms can be reached on (571) 272-1787. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
